

Project Report

T-Shirt Brand Performance Dashboard

1. Project Title

Insigh BI — Men's T-Shirt Brand Performance Dashboard

2. Business Problem

See the Business Problem Statement document for the full statement. In short: the business needed a consolidated, visual way to evaluate 200+ T-shirt brands on discounting, profitability, pricing, and assortment depth.

3. Tools & Technologies

- Power BI Desktop — data modeling, DAX measures, report visuals
- Data source: Azure
- DAX for calculated measures (Average Discount %, Average Profit %, Average Sales Price)

4. Data Overview

The dataset contains brand-level records for men's T-shirts, including fields such as:

- Brand
- Title
- Original Price
- Sale Price

5. Approach / Methodology

- Data import & cleaning — loaded data into Power BI, handled any inconsistent brand naming/duplicates
- DAX measures — created measures for Average Discount %, Average Profit %, and Average Sales Price
- Visualization — built a two-page report: cover page with brand slicer, and a Brand Performance page with five key visuals

6. Dashboard Visuals & Key Insights

Visual	Type	Key Finding
Top 5 Brands by Avg Discount %	Bar chart	iVOC (89%), WUXI (85%), Mischief Monkey (85%), Voroxy X AG (85%), Red Tape (83%) lead in discounting — potential margin risk zone
Top 5 Brands by Avg Profit %	Area chart	LP Jeans and MUJI tie for the highest average profit at 17%, followed closely by a cluster of brands at 16%
Top 5 Brands by Highest No. of Varieties	Donut chart	The Indian Garage Co (51 styles, 22.9%) and U.S. Polo Assn. (44 styles, 19.7%) offer the deepest assortment
Top 5 Brands by Highest Avg Sales Price	Ribbon chart	Armani Exchange (~6.1K), Brooks Brothers (~5.1K), Terra Luna (~5.0K) command the highest price points
Bottom 5 Brands by Avg Profit %	Pie chart	Ramadhani Cloth (3.5%), Gespo and Chimpaaanze (3% each), Be Active X AG and Aapska (2% each) are the least profitable brands

Overall average discount across all brands is ~82.9%, and overall average sales price is ~10 K .

7. Business Recommendations

- Review discount policy for iVOC, WUXI, Mischief Monkey, Voroxy X AG, and Red Tape — heavy discounting at 83–89% may be compressing margins disproportionately
- Double down on high-margin brands like LP Jeans and MUJI through better shelf placement or marketing spend
- Reassess partnerships with bottom-profit brands (Ramadhani Cloth, Gespo, Chimpaaansee, Be Active X AG, Aapska) — renegotiate terms or reduce inventory exposure
- Leverage premium brands (Armani Exchange, Brooks Brothers) for higher-margin bundling or premium collection campaigns
- Expand assortment for high-variety, well-performing brands (Indian Garage Co, U.S. Polo Assn.) if sales data supports demand

8. Limitations

- Report built from a static extract; profit %/discount % figures reflect a point-in-time snapshot
- Sample sizes vary by brand (some "bottom 5" brands may have very few SKUs, e.g. only 2), which can skew average % metrics
- No time-series/trend view included in this version

9. Future Scope

- Add a time trend page (monthly/quarterly profit and discount trends)
- Add category/sub-category breakdown (beyond just T-shirts)
- Automate data refresh from a live source (SQL/API) instead of manual load
- Add a brand scorecard combining all four metrics into a single ranking
